

CAMBRIDGE INTERNATIONAL EXAMINATIONS

Cambridge International General Certificate of Secondary Education

MARK SCHEME for the October/November 2014 series

0610 BIOLOGY

0610/23

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

Page 2	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

Abbreviations used in the Mark Scheme

- ; separates marking points
- / separates alternatives within a marking point
- R reject
- I ignore (mark as if this material was not present)
- A accept (a less than ideal answer which should be marked correct)
- AW alternative wording
- underline words underlined must be present
- max indicates the maximum number of marks that can be awarded
- mark independently the second mark may be given even if the first mark is wrong
- A, S, P, L Axes, Size, Plots and Line for graphs
- O, S, D, L Outline, Size, Detail and Label for drawings
- (n)ecf (no) error carried forward
- () the word / phrase in brackets is not required, but sets the context
- ora or reverse argument.
- AVP any valid point

Question	Answer	Marks	Additional Guidance
1	B (<i>Camelus dromedaries</i>) D (<i>Camelus ferus</i>) C (<i>Lama glama</i>) E (<i>Vicugna vicugna</i>) A (<i>Vicugna pacos</i>)	max 4	1 correct = 1 mark 2 correct = 2 marks 3 correct = 3 marks 4 or 5 correct = 4 marks
		[Total: 4]	
2 (a) (i)	glucose and oxygen (either order); carbon dioxide and water (either order);	2	I if energy has been added to the LHS (and rest is accurate and balanced) but R if energy is on the LHS A if correct chemical equation given
(ii)	maintenance of constant body temperature; movement / muscle contraction; example of movement e.g. running, breathing, peristalsis; synthesis of other chemicals / e.g. of such a chemical; growth / repair / cell division; AVP;	max 3	AW throughout e.g. active transport / transmission of nerve impulses / deamination
b (i)	2.9(dm ³); 1.4 – 1.5 (s);	2	
(ii)	difference: male exhales greater volume / rate of expiration is greater in male; similarity: male takes same time / 1.4 – 1.5 (s) to empty lungs;	2	ora for females sex must be stated clearly

Page 4	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

(iii)	would take longer to empty lungs / AW; would exhale smaller volume of air / AW;	max 1	
(c)	tar; nicotine; carbon monoxide; smoke particles / particulates; AVP;	max 2	A only one material not in the list for AVP e.g. cyanide
(d) (i)	anaerobic respiration: does not use oxygen; does not release water; does not produce carbon dioxide; releases (very) small amounts of energy; occurs in (skeletal) muscle cells only; produces lactic acid / lactate;	max 3	A if answers given for aerobic respiration but it must be stated that this is how the question is being answered A is only produced during exercise
(ii)	wine production / beer production / brewing / fermentation; bread making;	2	
		[Total: 17]	
3	sperm; haploid; ovary; oviduct; zygote;	5	
		[Total: 5]

Page 6	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

5	(a)	Hb present: combines with oxygen /forms oxyhaemoglobin; no nucleus: more volume for presence of haemoglobin /can transport more oxygen; small cell: small to pass through capillaries (without damage)/ increases surface area;	3													
	(b)	white blood cell; produces antibodies /phagocytosis (or description); platelet; produces blood clot;	4	either order A if different types of white blood cell are given (with correct functions)												
			[Total: 7]													
6		<table><tr><td>point of comparison</td><td>translocation</td><td>transpiration</td></tr><tr><td>substance moved</td><td>sucrose / amino acids;</td><td>water;</td></tr><tr><td>direction of movement</td><td>from region of production / leaf to region of storage / growth / respiration;</td><td>from surface of mesophyll cells to stomata;</td></tr><tr><td>tissue</td><td>phloem;</td><td>mesophyll / lower epidermis;</td></tr></table>	point of comparison	translocation	transpiration	substance moved	sucrose / amino acids;	water;	direction of movement	from region of production / leaf to region of storage / growth / respiration;	from surface of mesophyll cells to stomata;	tissue	phloem;	mesophyll / lower epidermis;	6	A sugar A region of storage to region of use / leaf to root I reference to xylem
point of comparison	translocation	transpiration														
substance moved	sucrose / amino acids;	water;														
direction of movement	from region of production / leaf to region of storage / growth / respiration;	from surface of mesophyll cells to stomata;														
tissue	phloem;	mesophyll / lower epidermis;														
			[Total: 6]

	Cambridge IGCSE – October/November 2014	0610	23

7		4	<p>4 or 5 correct = 4 marks 3 correct = 3 marks 2 correct = 2 marks 1 correct = 1 mark</p>
		[Total: 4]	

Page 8	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

8 (a)	carbon cycle: arrow from CO ₂ box to tree labelled P ; arrow from feces to CO ₂ box labelled D ; arrow from bison to CO ₂ box – R ; arrow from tree to CO ₂ box – R ;	4	A arrow from faeces to CO ₂ box (R)
(b)	water cycle: arrow from cloud to land labelled K ; arrow from stream/faeces/bison/tree to cloud labelled E ;	2	arrow must show evaporation from one of these listed
		[Total: 6]	
9 (a)	carbohydrates; lipids / fats; proteins; vitamins / named vitamin; water;	max 4	
(b)	cannot be digested; adds volume to contents of alimentary canal; promotes peristalsis; prevents constipation; prevents cancer AW;	max 3	A AVP e.g. absorbs some fats so prevents absorption into body

Page 9	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

(c)	<p>mechanisation (or example of); benefit: e.g. use of tractors to plough more land;</p> <p>(inorganic) fertilisers; improved crop growth;</p> <p>pesticides; more plants / animals grow / survive;</p> <p>herbicides; kills unwanted plants so more crop growth;</p> <p>artificial selection / selective breeding; improved quality of plants and animals;</p> <p>irrigation; more plants / animals survive / grow more / faster;</p> <p>crop rotation; reduction in pests / improved soil fertility;</p> <p>genetic engineering; introduction of desirable genes from other organisms;</p> <p>biotechnology; benefit: e.g. production of fungal protein;</p> <p>AVP plus explanation;;</p>	max 4	<p>AW throughout</p> <p>2 different methods with example required, method and example must match</p>
		[Total: 11]	

Page 10	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

10 (a)	structure	wind-pollinated	insect-pollinated	3	
	anther	hang outside of the petals / loosely attached / larger	hang inside of the petals / firmly attached / smaller;		
	stalk of stamen	long / flexible	short / stiff;		
	stigma	feathery / large	sticky / small;		
(b)	brightly coloured / large petals or flower; production of scent / odour; production of nectar; arrangement of petals / AW; presence of honey guide-lines;			max 3	
(c)	small; light; smooth / rounded;			max 1	I produced in large quantities
				[Total: 7]	

Page 11	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

11 (a)	(i)	meiosis: cell division; chromosome number halved / diploid to haploid;		
	(ii)	chromosome: thread of DNA; made up of string of genes;	4	
(b)	parental phenotype	$Bb \times Bb$;		A recessive given first i.e. bB
	gametes:	$B + b \times B + b$;		A either order ($b + B \times b + B$)
	offspring genotype:	$BB + Bb + Bb + bb$;		A ecf if mistake is made
	offspring phenotype:	blue + blue + blue + white;		
	ratio:	3 blue : 1 white;	5	
			[Total: 9]
