UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

CANDIDATE NAME		
CENTRE NUMBER	CANDIDATE NUMBER	
CHEMISTRY		0620/06

Paper 6 Alternative to Practical

October/November 2009 1 hour

Candidates answer on the Question Paper.

No additional materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen. You may use a pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 12 printed pages.

1 The apparatus below was used to make oxygen. The tube of manganese oxide was added For to the hydrogen peroxide solution by releasing the cotton. Examiner's Use 20 40 60 80 100 cm3 cotton hydrogen peroxide tube containing manganese oxide (a) Complete the boxes to identify the pieces of apparatus. [2] (b) Why was the tube of manganese oxide suspended in the flask? [1] (c) Give a test for oxygen. test result [2] [Total: 5]

2

2 A steel spoon can be coated in silver using electrolysis. The spoon must be very clean and free of grease.

3

(a) Suggest

- (i) one advantage of putting a thin layer of silver on the spoon,
- (ii) one disadvantage if the spoon is used frequently,
 (iii) why the spoon must be very clean and free of grease?
 [1]
- (b) Which electrode should be the spoon?
 [1]
 (c) Identify the metal from which the other electrode is made.
 - [1] [Total: 5]

Three unlabelled bottles of chemicals each contained one of the following liquids:
sodium nitrate dissolved in water;
pure water;
hexene.
(a) Give a test by which you could identify sodium nitrate solution.
test
result [2]
(b) Give a test by which you could identify pure water.
test
101
result [2]
(c) Give a test by which you could identify hexene.
test
result[2]
[Total: 6]

For Examiner's Use

4 A student investigated the temperature change produced when equal lengths of magnesium ribbon reacted with excess dilute sulfuric acid of different concentrations (labelled solutions **A**, **B**, **C**, **D** and **E**).

Five experiments were carried out.

Experiment 1

Using a measuring cylinder, 20 cm^3 of sulfuric acid solution **A** was poured into a beaker. The initial temperature of the solution was measured. A length of magnesium ribbon was added to the solution and stirred. The highest temperature reached was measured.

Experiment 2

Experiment 1 was repeated using solution **B** instead of solution **A**. The initial and highest temperatures were measured as before.

Experiment 3

Experiment 1 was repeated using solution **C**. The initial and highest temperatures were measured.

Experiment 4

Experiment 1 was repeated using solution \mathbf{D} . The initial and highest temperatures were measured.

Experiment 5

Experiment 1 was repeated using solution E. The initial and highest temperatures were measured.

Use the thermometer diagrams in the table on page 6, to record the initial and highest temperatures in each experiment.

© UCLES 2009

solution of sulfuric acid	thermometer diagram	initial temperature /°C	thermometer diagram	highest temperature /°C	change in temperature /°C
A	- 25 - 20		40 -35 -30		
В	- 25 - 20		40 -35 -30		
С	- 30 - 25 - 20		40 - 35 - 30		
D	30 - 25 - 20		35 30 -25		
E	30 -25 -20		-25 -20		

[4]

(a) Work out the temperature change for each experiment and record the values in the table. [1]

- change in temperature /°C Use the results and observations to answer the following questions. (c) What type of chemical reaction occurs when magnesium reacts with dilute sulfuric acid? [1] (d) (i) Which Experiment produced the largest temperature change? [1] (ii) Suggest why this Experiment produced the largest temperature change. [1]
- (b) Draw a labelled bar chart of the results for Experiments 1, 2, 3, 4 and 5 on the grid below.[4]

(e)	Pre	dict the effect on the temperature changes that would happen if	
	(i)	equal masses of magnesium powder were used in the Experiments.	
		~	[1]
	(ii)	40 cm ³ of dilute sulfuric acid was used in Experiment 1.	
			[1]
	(iii)	Explain your answer to (e)(ii) .	
			[1]
(f)	Giv	e one possible source of experimental error in this investigation.	
			[1]
		[Total:	16]

5 Three aqueous solutions K, L and M, were analysed. L was a solution of sodium hydroxide. The tests on the solutions and some of the observations are in the table. Complete the observations in the table. Do not write any conclusions in the table.

tests	observations
(a) Appearance of the solutions.	
solution K	colourless liquid
solution L	colourless liquid
solution M	colourless liquid
(b) Universal Indicator paper was used to test the pH of each solution.	
solution K	pH 10
solution L	pH [1]
solution M	pH 2
 (c) tests on solution K (i) Drops of solution K were added to copper sulfate solution in a test-tube. Excess of solution K was the added to the test-tube. (ii) Experiment (c)(i) was repeated using aqueous aluminium sulfate instead of aqueous copper sulfate. (iii) A few drops of nitric acid an silver nitrate solution were added to solution K. 	n pale blue precipitate formed deep blue solution formed white precipitate formed insoluble in excess deno visible reaction
 (d) <u>tests on solution L</u> (i) Experiment (c)(i) was repeated using solution L. (ii) Experiment (c)(ii) was repeated using solution L. (e) <u>test on solution M</u> Experiment (c)(iii) was 	[1]
repeated using solution M .	white precipitate formed

(f)	What conclusions can you make about solution K ?	For Examiner's Use
	[2]	
(g)	What conclusions can you make about solution M ?	
	[2]	
	[Total: 9]	

6 Dilute hydrochloric acid was added to excess calcium carbonate in a beaker as shown.

The beaker was placed on a balance and the mass of the beaker and contents recorded every minute.

The results are shown in the table.

mass of beaker and contents/g	184.0	178.0	175.6	174.6	174.0	174.0
time/min	0	1	2	3	4	5

(a) Plot the results on the grid and draw a smooth line graph.

11

7 Leaves from trees contain a mixture of coloured pigments which are not soluble in water. A For student was given these two instructions to investigate the pigments in the leaves. Examiner's Use 1. Crush some leaves to extract the coloured pigments. 2. Use the liquid extract to find the number of coloured pigments in the leaves. (a) What would the student need in order to effectively carry out instruction 1? [3] _____ (b) Describe an experiment to carry out instruction 2. A space has been left below if you want to draw a diagram to help answer the question.[4] [Total: 7]
