0653/31

Paper 3 (Extended)

May/June 2010

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

A copy of the Periodic Table is printed on page 24.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

1

Total	

This document consists of **24** printed pages.

- 1 Fig. 1.1 shows some of the animals and plants that live in or close to a pond.

0653/31/M/J/10

Fig. 1.1

- (a) Give the correct term for each of the following.

0653/31/M/J/10

all the animals and plants that live in and around the pond

all the living things, and their environment, interacting with each other

[2]

- (b) The pond weed is a producer. Water snails and water voles are primary consumers. The heron and pike are secondary consumers.

0653/31/M/J/10

Draw a food web that includes only these five organisms.

[3]

- 1 (c) The pond is at the bottom of a sloping field which was ploughed. 0653/31/M/J/10

During very heavy rain, a lot of soil from the field was washed into the pond. It made the water cloudy, and stopped the light from reaching the leaves of the water plants, so that the plants died.

After a while, the fish and other animals also died.

- (i) Give **two** reasons why the fish and other animals died. 0653/31/M/J/10

1

.....

2

..... [2]

- (ii) Suggest **one** way in which the farmer could stop the soil erosion from the field.

0653/31/M/J/10

.....

.....

..... [1]

For
Examiner's
Use

- 2 (a) Fig. 2.1 shows a bicycle with a front lamp and a rear lamp powered by a battery.

0653/31/M/J/10

For
Examiner's
Use

Fig. 2.1

Fig. 2.2 shows how the lamps are connected.

Fig. 2.2

- 2 a (i) What name is given to this type of circuit?

0653/31/M/J/10

..... [1]

- 2 a (ii) The resistance of each lamp in the circuit is $4\ \Omega$.

0653/31/M/J/10

Calculate the combined resistance of the two lamps.

State the formula that you use and show your working.

formula

working

..... [3]

- 2 (b) Fig. 2.3 shows a metal nut on a bicycle wheel which is difficult to unscrew.

0653/31/M/J/10

For
Examiner's
Use

Fig. 2.3

Explain why a long spanner is better than a short spanner to unscrew the nut.

.....

.....

..... [2]

- 2 (c) As the bicycle moves along the road at 4 m/s, the brakes are suddenly applied. The bicycle comes to a stop after 10 m. The average frictional force stopping the bicycle is 250 N. As the bicycle slows down, work is done.

0653/31/M/J/10

Calculate the work done as the bicycle slows down from 4 m/s to a stop.

State the formula that you use and show your working.

formula

working

..... [2]

- 3 Aluminium, iron and sodium are metallic elements. Aluminium and iron are widely used, but no useful objects can be made out of metallic sodium.

0653/31/M/J/10

For
Examiner's
Use

aluminium alloys are
used in aircraft

iron is used to make
steel for cars

- 3 (a) Use your knowledge of the alkali metals to state **one** reason why no useful objects can be made out of metallic sodium.

0653/31/M/J/10

.....
..... [1]

- 3 (b) The diagram in Fig. 3.1 shows a cross section through a blast furnace in which iron is extracted from iron oxide.

0653/31/M/J/10

Symbolic equations for three important chemical reactions which occur in the blast furnace are also shown in Fig. 3.1. **One** of these equations is not balanced.

Fig. 3.1

- 3 b (i) Balance the incorrect equation in Fig. 3.1 by writing the required numbers in the equation on the diagram.

0653/31/M/J/10 [1]

3 b (ii) The three equations in Fig. 3.1 all represent redox reactions. 0653/31/M/J/10

State **two** substances shown in Fig. 3.1 which have been **reduced**.

Explain your answer briefly.

.....

.....

..... [2]

(c) Aluminium is produced from aluminium oxide using electrolysis as shown in Fig. 3.2.

0653/31/M/J/10

Fig. 3.2

0653/31/M/J/10

3 c (i) The lining of the apparatus acts as the cathode in this process.

Describe what happens to aluminium ions when they meet the cathode surface.

.....

.....

..... [2]

3 c (ii) Explain why aluminium cannot be extracted in a blast furnace in the same way as iron.

0653/31/M/J/10

.....

.....

..... [2]

- 3 c (iii) The chemical formula of aluminium oxide is Al_2O_3 and the electrical charge of an oxide ion is -2.

0653/31/M/J/10

For
Examiner's
Use

Deduce the electrical charge of an aluminium ion.

Explain your answer.

.....

.....

..... [2]

- 4 Fig. 4.1 shows samples of three of the elements in Group VII (Group 7) of the Periodic Table.

For
Examiner's
Use

Fig. 4.1

- 4 (a) The elements in Fig. 4.1 are at the same temperature. One element is a solid, one is a liquid and one is a gas. 0653/31/M/J/10

(i) State which element, **X**, **Y** or **Z**, has the highest melting point. [1]

(ii) Suggest the names of the elements, **X**, **Y** and **Z**.

X

Y

Z [1]

- 4 (b) An atom of fluorine has a proton (atomic) number of 9 and a nucleon (mass) number of 19. 0653/31/M/J/10

(i) State the number of neutrons in one atom of fluorine.

..... [1]

(ii) Calculate the relative molecular mass of a fluorine molecule.

0653/31/M/J/10

..... [1]

- 4 (c) Hydrogen chloride gas may be produced by combining the gases hydrogen and chlorine.

0653/31/M/J/10

For
Examiner's
Use

- (i) Fig. 4.2 shows the chemical bonding in hydrogen and chlorine molecules.

In the space in Fig. 4.2 draw a similar diagram to show the bonding in one molecule of hydrogen chloride.

hydrogen molecule

chlorine molecule

hydrogen chloride molecule

Fig. 4.2

[2]

- 4 c (ii) Hydrochloric acid is produced when hydrogen chloride gas reacts with water.

Write the symbol and electrical charge of an ion which forms in the mixture when hydrogen chloride gas reacts with water.

0653/31/M/J/10

..... [1]

- 4 (d) A student is asked to try and produce some bromine by mixing two solutions chosen from the list below.

0653/31/M/J/10

*For
Examiner's
Use***potassium bromide****potassium chloride****potassium iodide****chlorine****iodine**

When the student mixed her chosen solutions, she successfully produced bromine.

- 4 d (i) State which solutions the student chose.

0653/31/M/J/10

..... [1]

- 4 d (ii) Explain your answer to (i).

0653/31/M/J/10

.....
..... [1]

- 5 An investigation was carried out in Tamil Nadu, India, into the best conditions for growing tomatoes. The tomato plants were grown in unheated glasshouses or outside. Netting was used to provide shade in one of the glasshouses.

0653/31/M/J/10

For
Examiner's
Use

glasshouse A
no shade

glasshouse B
all four side walls shaded with netting

outside
no shade

In each glasshouse, and outside, the mean temperature in each month between January and October was measured. Fig. 5.1 shows the results.

Fig. 5.1

- (a) State the month in which the highest mean temperature was reached

0653/31/M/J/10

in glasshouse A,

outside.

[1]

5 (b) Light from the Sun passes through the glass of the glasshouse, into the air inside. The soil and other surfaces in the glasshouse re-emit some of this radiation as longer wavelength, infra-red, radiation. Some of this radiation cannot pass through glass.

- (i) Use this information to explain why the air inside the glasshouses **became** warmer than the air outside. 0653/31/M/J/10

.....

 [2]

- 5 (ii) Use your knowledge of convection to explain why the air inside the glasshouses **stayed** warmer than the air outside. 0653/31/M/J/10

.....

 [2]

5 (c) Table 5.2 shows the mass of tomatoes produced by each plant in the two glasshouses and outside.

Table 5.2

	mass of tomatoes produced per plant / g
glasshouse A	1020
glasshouse B	2310
outside	1380

- 5 c (i) Tomatoes are a fruit, produced from the fertilised flowers of tomato plants. Tomato flowers are pollinated by bees.

Use the information in Fig. 5.1 to suggest why the plants produced more tomatoes in glasshouse **B** than in glasshouse **A**. 0653/31/M/J/10

.....
 [2]

- 5 c (ii) Suggest **two** factors, other than temperature, that could be different in the glasshouses compared to outside, and that could have affected the results.

0653/31/M/J/10

1
 2 [2]

- 5 (d) (i) Tomato fruits are red and juicy. Explain how this helps tomato seeds to be dispersed away from the parent plant.

0653/31/M/J/10

.....

.....

..... [2]

- (ii) Explain why it is useful to plants for their seeds to be dispersed away from the parent plant.

0653/31/M/J/10

.....

.....

..... [2]

- 6 Fig.6.1 shows two dolphins communicating with each other using sound waves.

0653/31/M/J/10

For
Examiner's
Use

Fig. 6.1

- 6 (a) Sound travels at 1500 m/s through water. It takes 0.5 seconds for the sound wave to travel from one dolphin to the other dolphin.

0653/31/M/J/10

Calculate the distance between the two dolphins.

State the formula that you use and show your working.

formula

working

..... [2]

6 (b) Fig. 6.2 shows the motion of a dolphin travelling through water for 30 seconds.

0653/31/M/J/10

For
Examiner's
Use

Fig. 6.2

0653/31/M/J/10

(i) On the graph, use a letter **A** to label a period when the dolphin was accelerating. [1]

(ii) Describe the motion of the dolphin between 5 and 15 seconds. 0653/31/M/J/10

..... [1]

(iii) Calculate the total distance travelled by the dolphin. 0653/31/M/J/10

Show your working.

..... [2]

- 6 (c) Rays of light from the Sun hit the surface of the water. Some light rays are refracted at the surface and some are reflected. The incident and refracted rays are shown on the diagram in Fig. 6.3.

0653/31/M/J/10

For
Examiner's
Use

Fig. 6.3

0653/31/M/J/10

- (i) On Fig. 6.3 use a ruler to draw a ray which is reflected from the surface. [1]
- (ii) Label clearly the angle of incidence, i , and angle of reflection, r . [1]

0653/31/M/J/10

- 7 The skin helps to regulate the body temperature. This is an important part of homeostasis.

(a) The skin is an organ.

0653/31/M/J/10

Explain the meaning of the term *organ*.

.....
 [1]

- 7 (b) Fig. 7.1 shows the skin when the body is too cold and when it is too hot.

0653/31/M/J/10

Fig. 7.1

Explain how each of the changes shown in Fig. 7.1 helps the body to cool down when it is too hot.

- 7 b (i) the change in the activity of the sweat gland

0653/31/M/J/10

.....

 [2]

- 7 b (ii) the change in the width of the blood vessels

0653/31/M/J/10

.....

 [2]

7 (c) Another example of homeostasis is keeping the blood sugar level constant.

(i) Name the sugar that is transported in the blood. 0653/31/M/J/10

..... [1]

(ii) Name the hormone that reduces the blood sugar level if it gets too high.

0653/31/M/J/10

..... [1]

(iii) Suggest why it is harmful to the body if the blood sugar level falls very low.

0653/31/M/J/10

.....

.....

..... [2]

- 8 The bar charts in Fig. 8.1 show the approximate percentages of the main gases in the atmospheres of three planets, **X**, **Y** and **Z**, in our solar system.

0653/31/M/J/10

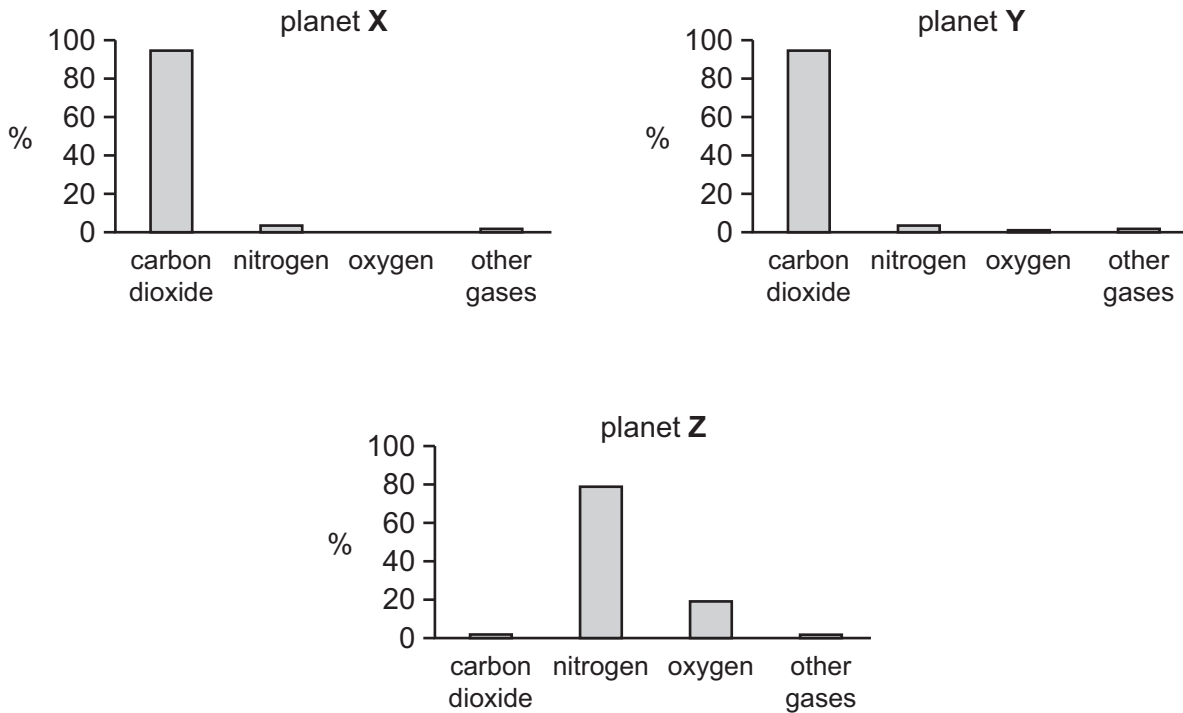

For
Examiner's
Use

Fig. 8.1

- 8 (a) (i) Explain briefly how the information in Fig. 8.1 shows that planet **Y** is **not** the Earth.

0653/31/M/J/10

..... [1]

- 8 (a) (ii) Name **one** of the 'other gases' in unpolluted air on the Earth. 0653/31/M/J/10

..... [1]

- 8 (b) Fig. 8.2 shows apparatus which can be used to measure the percentage of oxygen in the atmosphere of planet Z.

0653/31/M/J/10

For
Examiner's
Use

Fig. 8.2

When the piston of gas syringe **A** is pushed in the direction of the arrow, the air flows through the pieces of copper into syringe **B**. The lower diagram in Fig. 8.2 shows how the apparatus appears when this is done.

The pieces of copper are then heated very strongly. The air is pushed many times between **A** and **B** over the hot copper. The copper reacts with all the oxygen in the air.

The apparatus is then allowed to cool to room temperature.

- (i) Predict the volume of gas which remains in the apparatus at the end of the experiment.

0653/31/M/J/10

Explain your answer.

volume

explanation

.....

.....

.....

[3]

- 8 b (ii)** In the experiment, many small pieces of copper, rather than a single larger piece are used.

*For
Examiner's
Use*

Explain, in terms of particles, the effect this has on the rate of the oxidation reaction.

0653/31/M/J/10

.....

.....

.....

..... [3]

9 (a) Alpha, beta and gamma are three types of radiation emitted during radioactive decay.

(i) State the meaning of the term *radioactive decay*. 0653/31/M/J/10

..... [1]

(ii) Alpha radiation is described as ionising radiation. 0653/31/M/J/10

Explain the meaning of the term *ionising radiation*.

..... [1]
.....

9 (b) (i) Explain why alpha radiation is deflected by an electric field but gamma radiation is not. 0653/31/M/J/10

..... [1]
.....

(ii) Explain why beta radiation is deflected the opposite way to alpha radiation by an electric field. 0653/31/M/J/10

..... [1]
.....

(iii) Explain why it is more dangerous to swallow a substance that emits alpha radiation than one that emits gamma radiation. 0653/31/M/J/10

..... [2]
.....
.....

(c) We are exposed to radiation all the time and we receive it in various ways.

What name is given to the radiation that is around us all the time?

0653/31/M/J/10 [1]
.....
