

DIFFERENCE BETWEEN MAMMALS AND VERTEBRATES

1

The red slender loris, *Loris tardigradus*, is a nocturnal mammal that feeds at night on flowers, fruit and a variety of small animals. It is found in forest ecosystems in South Asia.

Fig. 3.1 shows a red slender loris.

Fig. 3.1

3 (b) State three ways in which mammals, such as the red slender loris, differ from other groups of vertebrates.
